Dispatch and Issue: Quick Reference

A dispatch reduces on-hand stock. Check the request, confirm availability, issue against a reference, and make sure the recipient and the record agree.

1. Confirm the request

- Check the item, quantity, requesting location or person, and the authorisation for the issue.
- Confirm the unit of measure; a request for boxes is not a request for pieces.
- If the request is outside the approved catalogue, stop and escalate it.

2. Check availability

- Review on-hand stock and the reorder point before promising a quantity.
- Leave enough stock to cover the location's requirement; do not issue the last unit without approval.
- If stock is short, record the quantity that can be issued and agree the balance as a backorder.

3. Issue the stock

- Go to Inventory, find the product, and choose Remove stock.
- Enter the issued quantity and a reference such as a requisition, work order, or dispatch note.
- Add a note when the issue is partial or urgent. Submit once.
- Over-removal is blocked; stock cannot be driven below zero.

4. Close out

- Ask the recipient to check the item and quantity before they leave.
- Verify the new balance and the Dispatch movement in the audit history.
- File the signed requisition or dispatch note with the movement reference.
- Returns come back through Receive stock, with the original reference in the note.
